PATHOLOGISTS

Rapid examination of fresh tissue using light- sheet microscopy

Nicholas P. Reder, MD, MPH

11/7/2017

Nicholas P. Reder, MD, MPH

- **Earned a B.S. from the University of Michigan**
- **Earned an M.P.H. in epidemiology from Emory University**
- **Earned MD from Loyola Stritch School of Medicine in 2014**
- **Genitourinary pathology fellow in the University of Washington Department of Pathology.**

Disclaimer

- **The CAP does not permit reproduction of any substantial portion of the material in this Webinar without its written authorization. The CAP hereby authorizes attendees of the CAP Webinar to use the PDF presentation solely for educational purposes within their own institutions. The CAP prohibits use of the material in the Webinar – and any unauthorized use of the CAP’s name or logo – in connection with promotional efforts by marketers of laboratory equipment, reagents, materials, or services.**

Disclaimer

- **Opinions expressed by the speaker are the speaker's own and do not necessarily reflect an endorsement by the CAP of any organizations, equipment, reagents, materials, or services used by participating laboratories.**

Disclosure

- **Dr. Reder holds a patent and has a start-up company (Alpenglow Optics, LLC) related to light-sheet microscopy work.**

Learning Objectives

- **Understand the different techniques for examination of fresh tissue**
- **Be able to articulate the strengths and weaknesses of each technique**
- **Describe use-cases for slide-free microscopy of fresh tissue**

Outline

- **Motivation for slide-free microscopy of fresh tissue**
- **Overview of slide-free microscopy techniques**
- **False-coloring to mimic H&E**
- **Use-cases**
- **Summary**

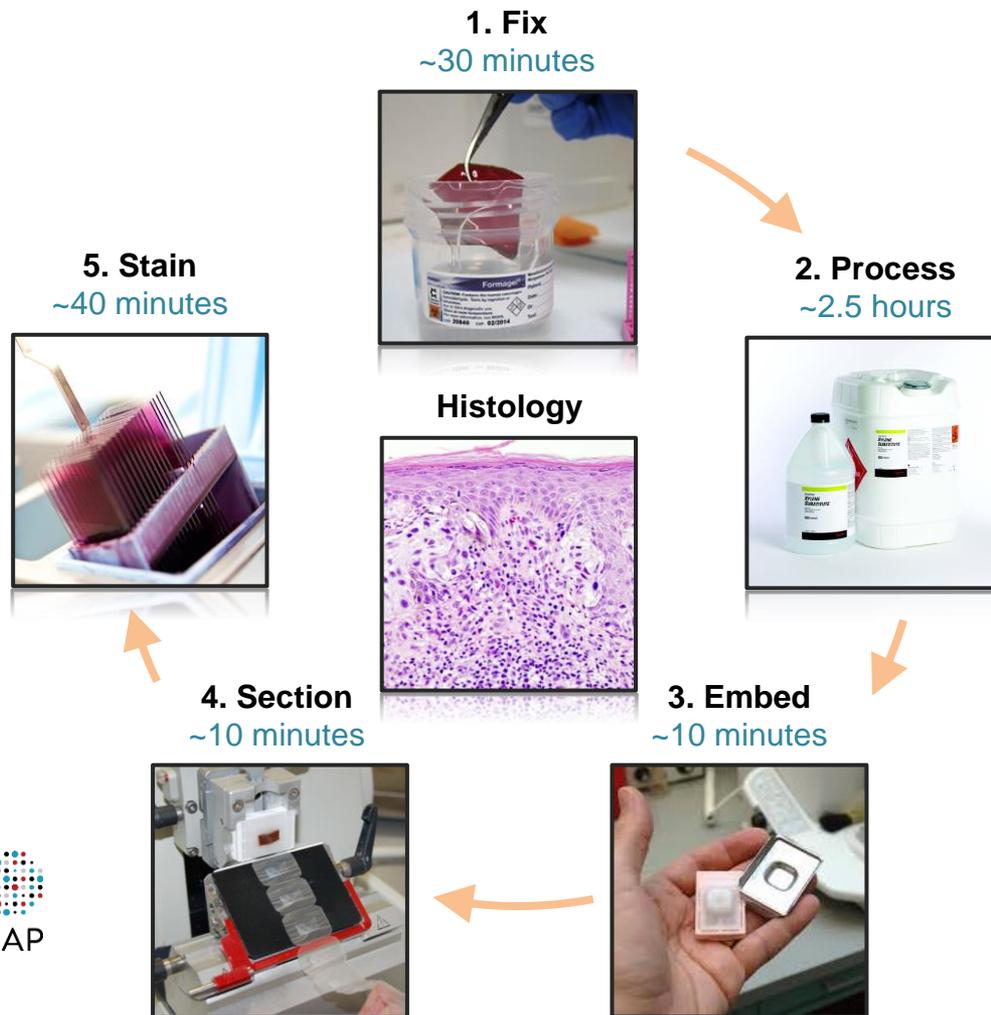

Outline

- **Motivation for slide-free microscopy of fresh tissue**
- **Overview of slide-free microscopy techniques**
- **False-coloring to mimic H&E**
- **Use-cases**
- **Summary**

Motivation: pathology has remained unchanged for a century

Rapid histology: 4 hours

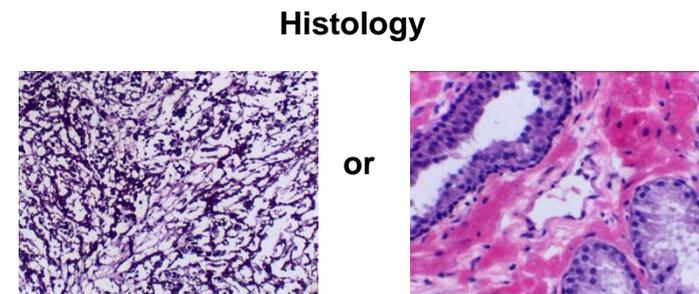

Frozen Section: 10 minutes

1. Freeze
~2 minutes

2. Section
~2 minutes

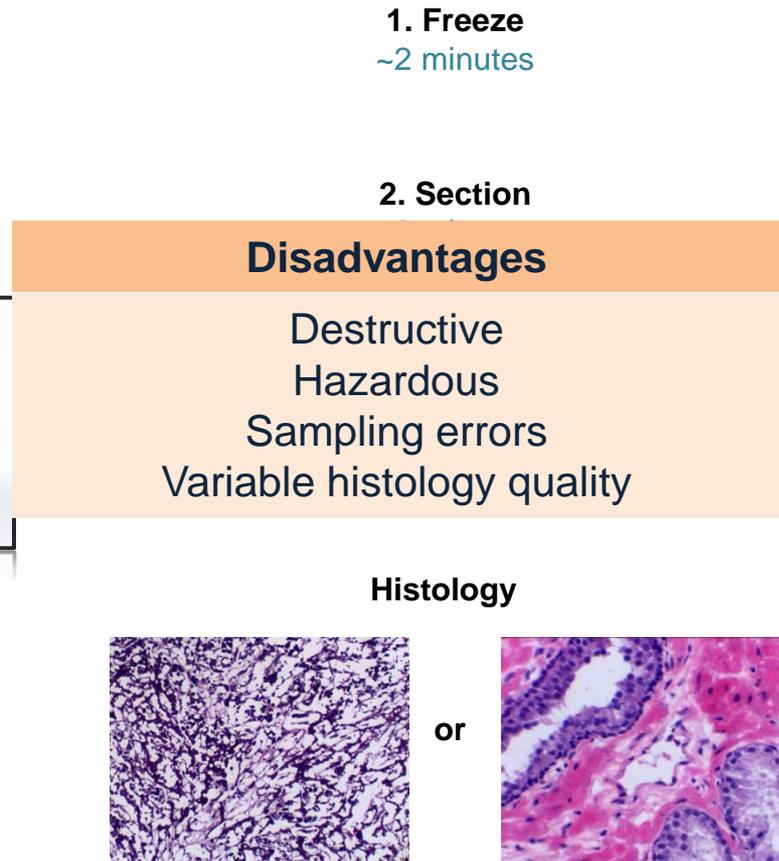

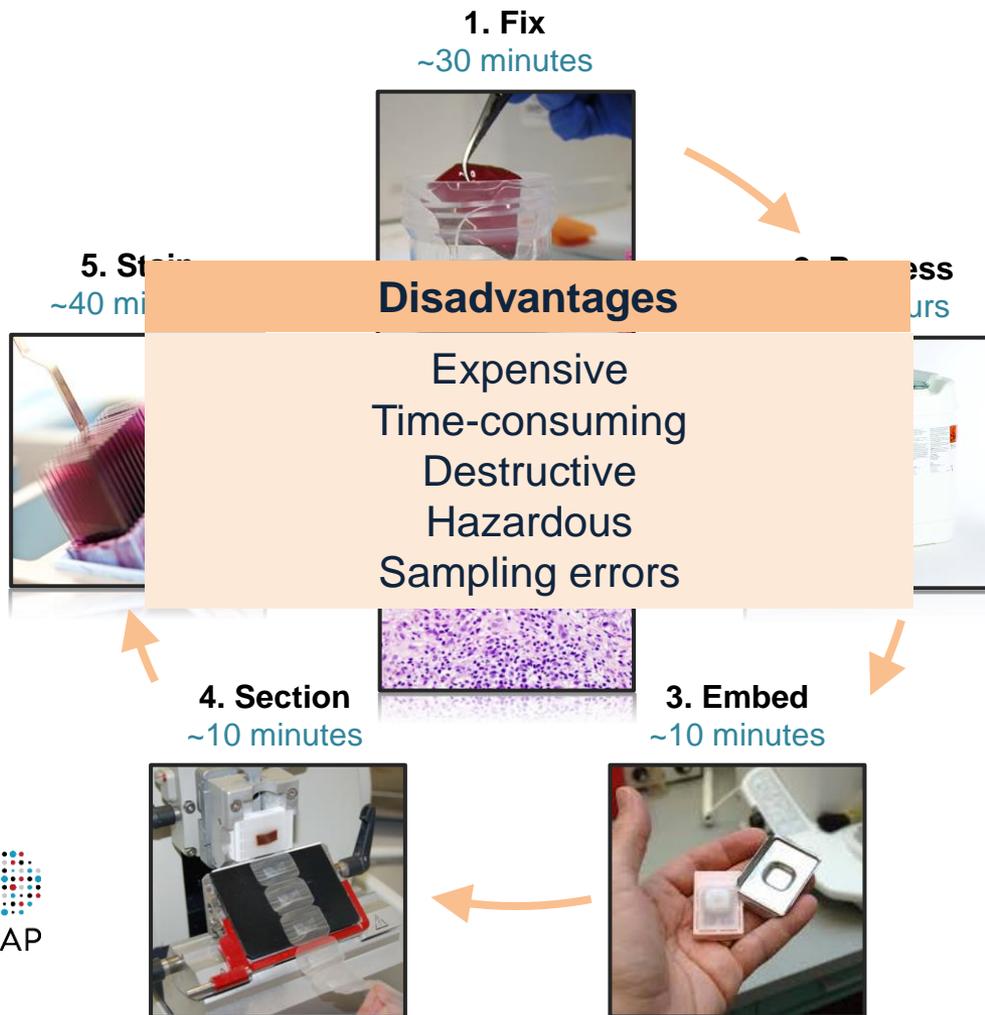

3. Stain
~4 minutes

Motivation: pathology has remained unchanged for a century

Rapid histology: 4 hours

Frozen Section: 10 minutes

Goal: non-destructive, slide-free, 'digital' pathology

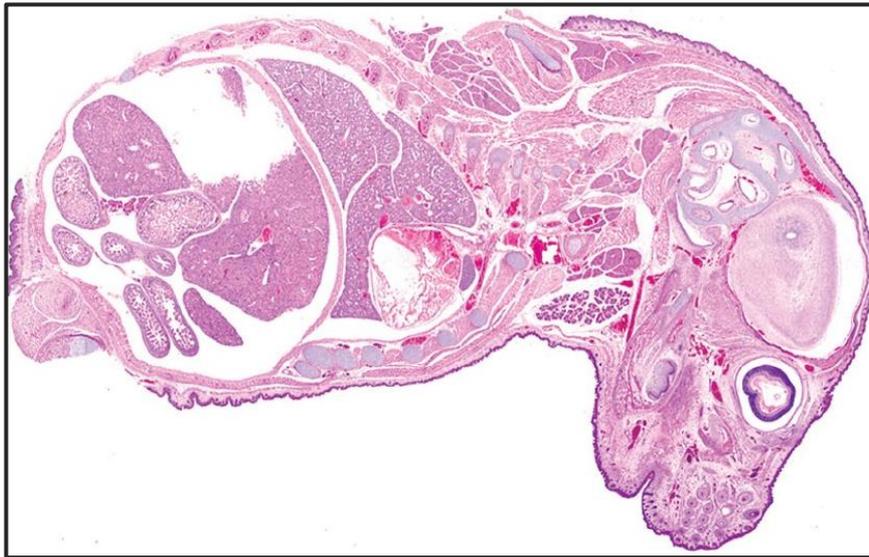

1. Stain
<1 minute

2. Image
<10 minutes

Wide-area 'digital' histology

Advantages

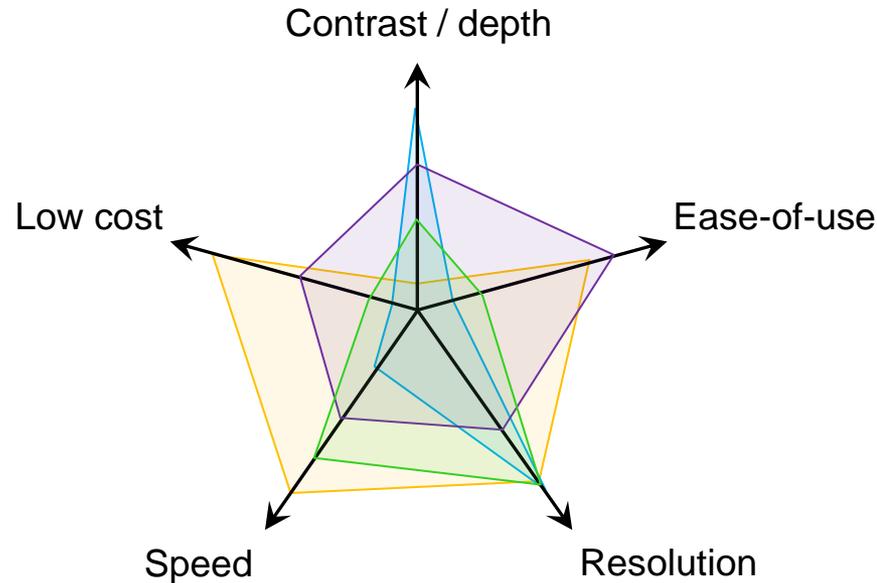

- Fast
- Digital
- Non-destructive
- Slide-free
- Wide-area

Outline

- **Motivation for slide-free microscopy of fresh tissue**
- **Overview of slide-free microscopy techniques**
- **False-coloring to mimic H&E**
- **Use-cases**
- **Summary**

Overall comparison of **fluorescence** microscopy technologies

Surface imaging

Microscopy method

MUSE

Structured-illumination

Confocal, Nonlinear

Light-sheet

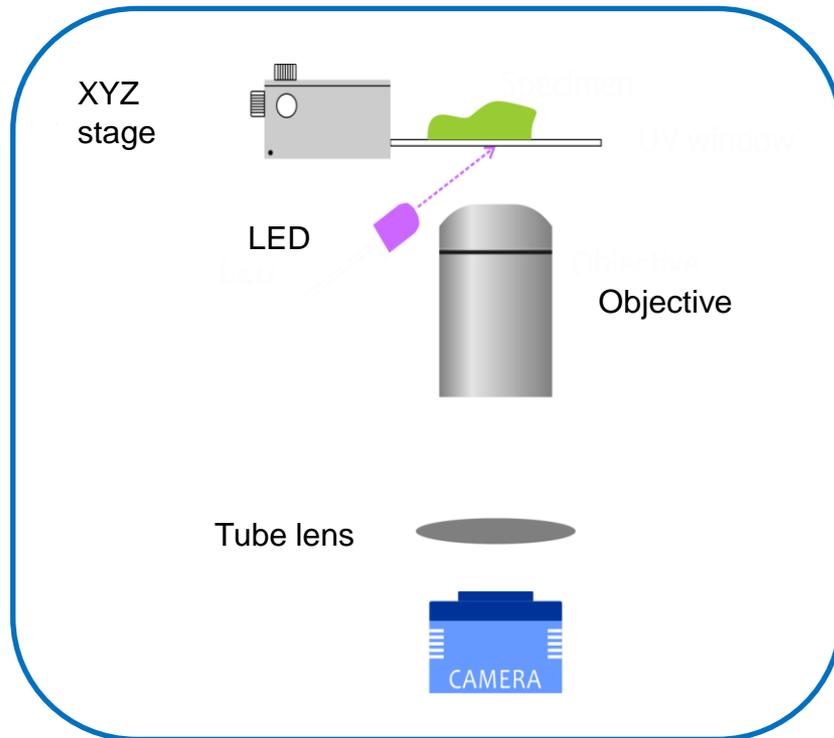

CAP

Similarities across all techniques

- Slide-free imaging → Efficient workflow
- Non-destructive → Preservation of tissue for molecular testing
- Fluorescence imaging: need to use topically applied fluorescent dyes, or endogenous fluorophores (autofluorescence)
- Other non-fluorescent techniques can achieve slide-free, non-destructive imaging, but they are beyond the scope of this presentation
 - OCT
 - Photoacoustic
 - Spectroscopy

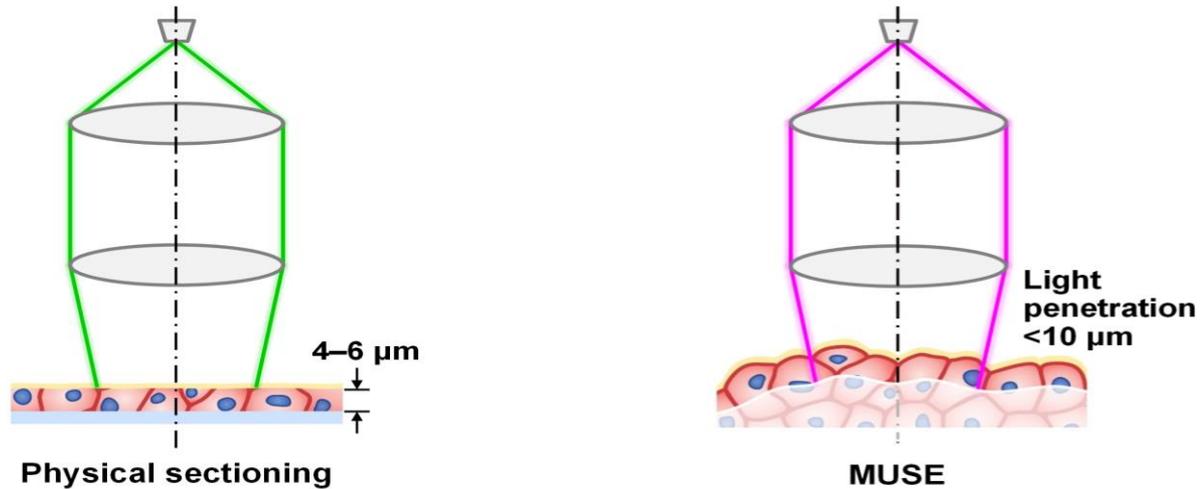

MUSE

- Microscopy with UV Surface Excitation
- UV light has limited penetration (10 microns)
- Advantages
 - Fast
 - Simple
 - Inexpensive
 - High resolution
- Disadvantages
 - Surface imaging only

MUSE

How does MUSE produce images?

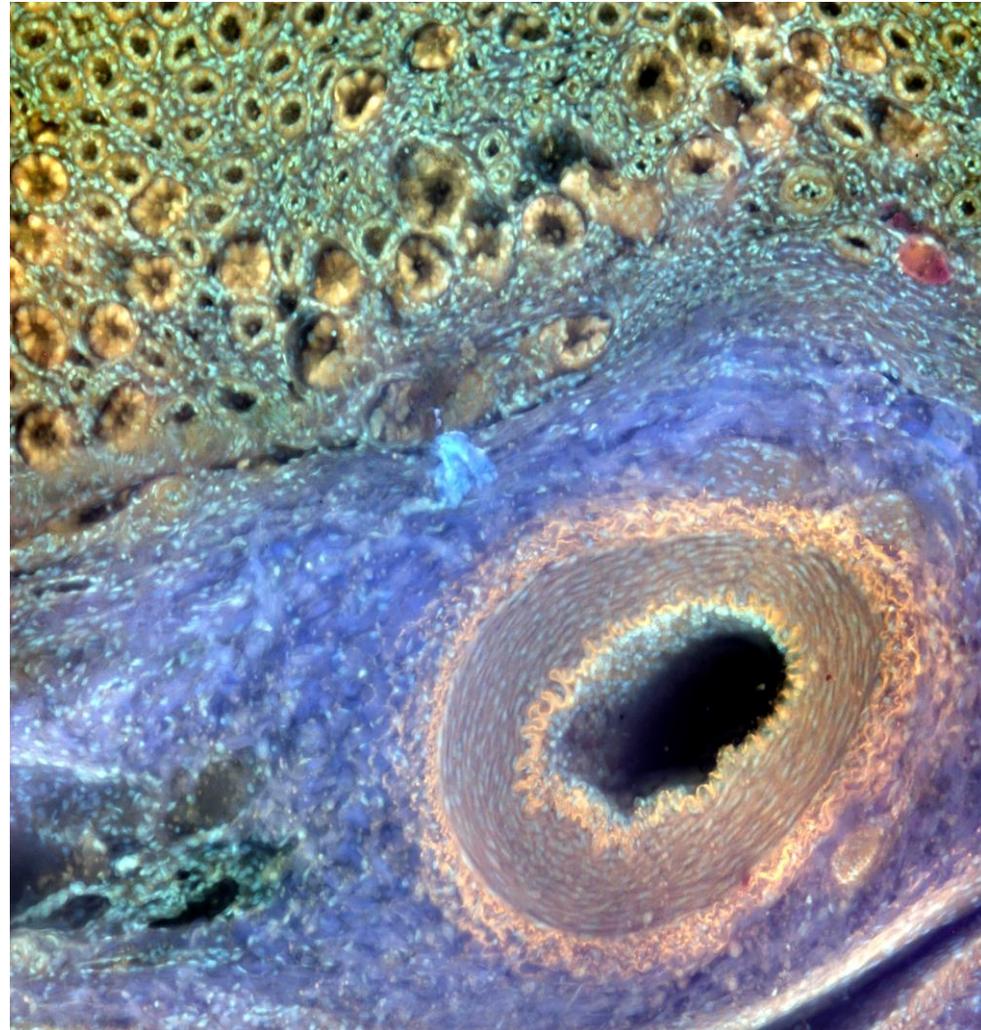

Limited penetration of UV light → “Optical section”

MUSE

Single-excitation source, color CCD camera

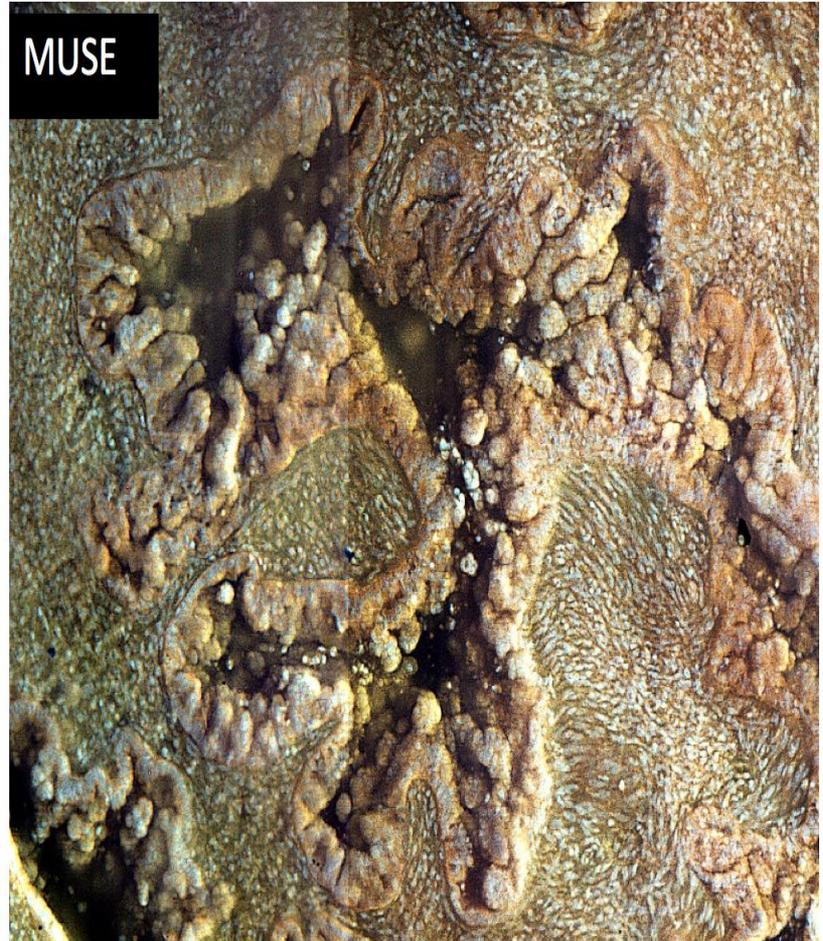

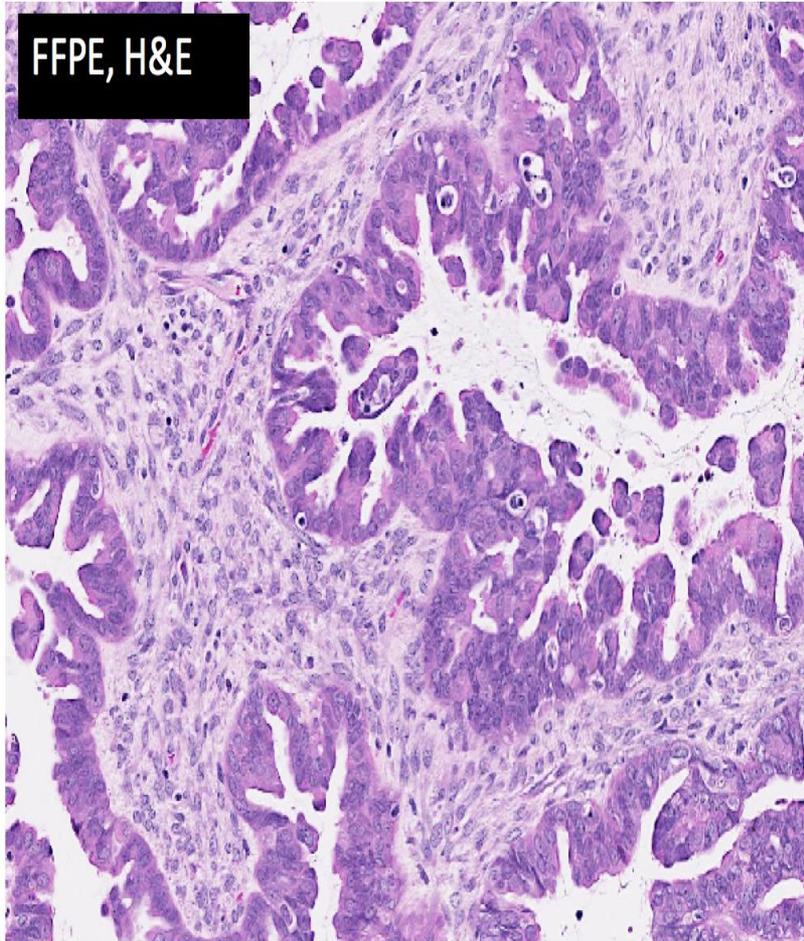

- **Orange**: elastic laminae in artery
- **Blue**: collagen
- **Green, orange** and **light blue**: renal tubules and nuclei

Slide courtesy of Dr. Richard Levenson, UC Davis

MUSE

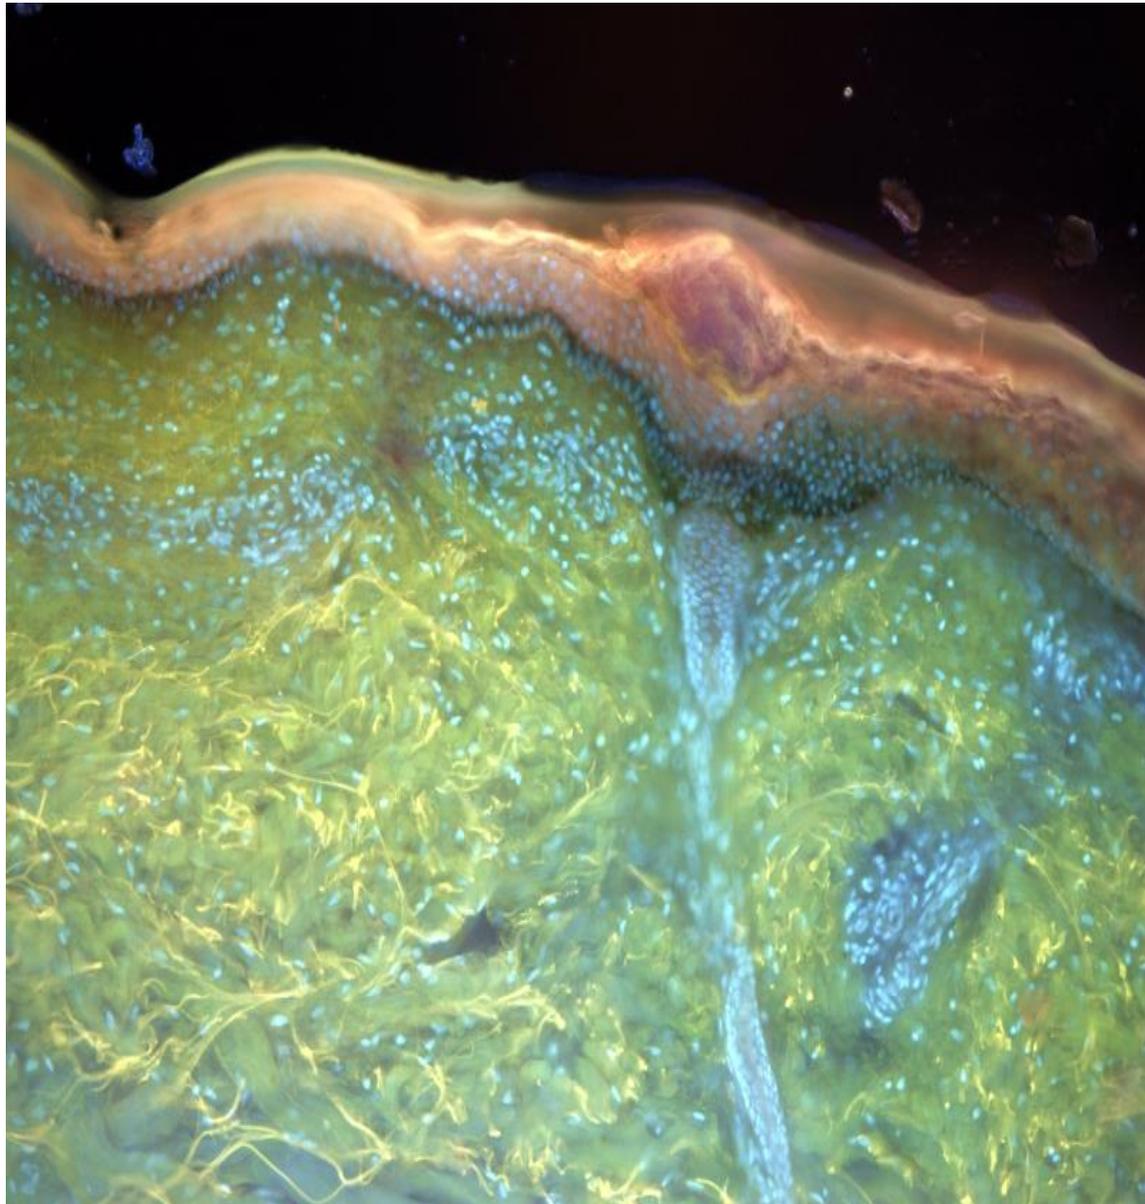

SEROMUCINOUS OVARIAN CARCINOMA

Slide courtesy of Dr. Richard Levenson, UC Davis

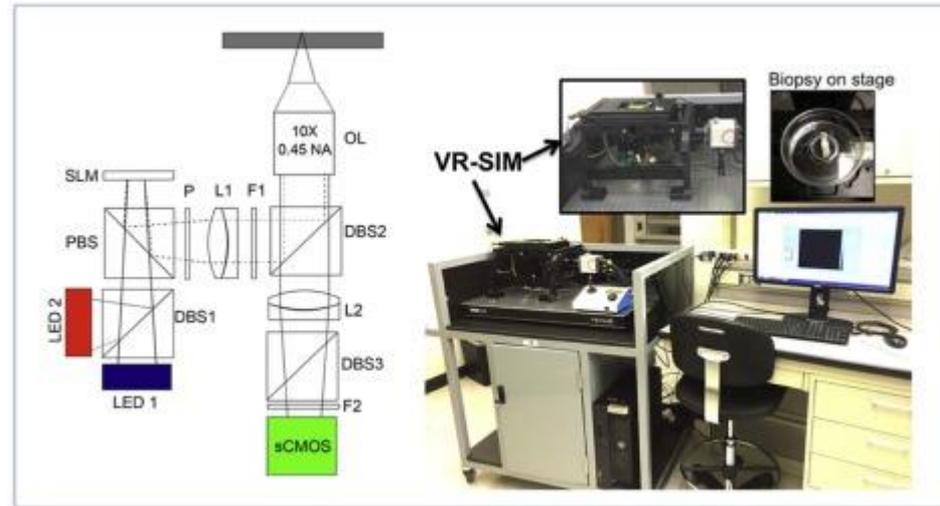

MUSE

- **Example: Skin**
- **Easy distinction between elastin (yellow) and collagen (green)**
- **Usually requires special stains**

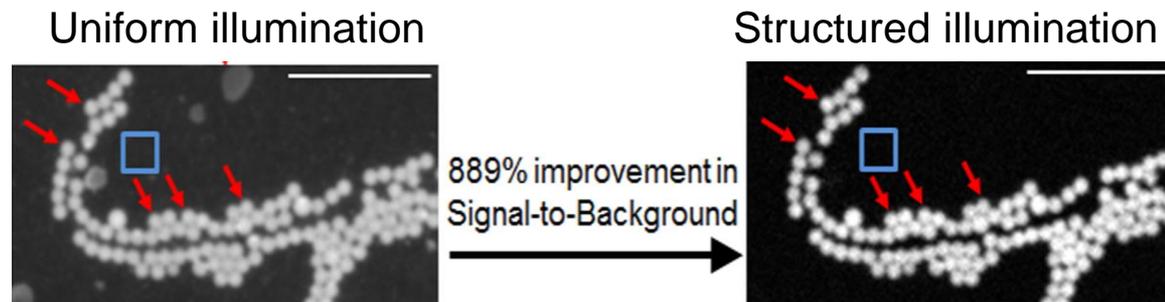

Structured Illumination

- **Structured illumination microscopy**
- **Uses patterned light to improve resolution**
- **Advantages**
 - Fast
 - High resolution

- **Disadvantages**
 - Modest imaging depth
 - Complex optics

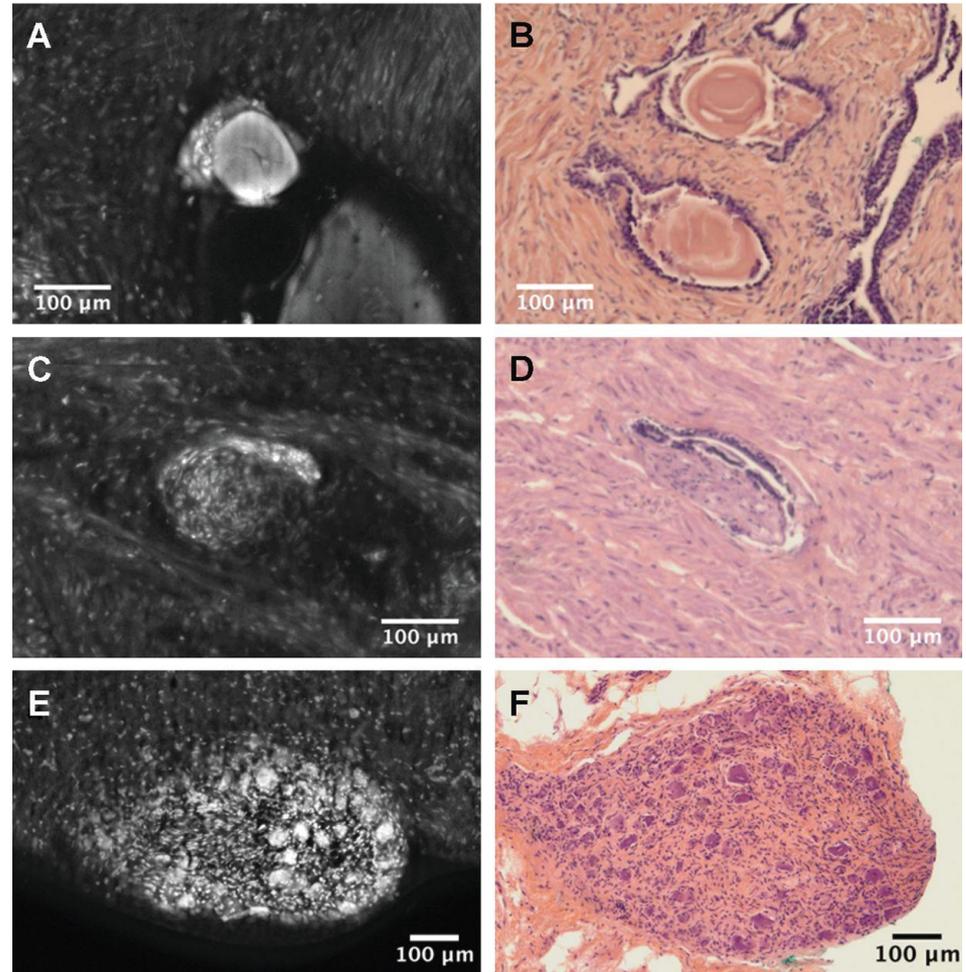

Fu HL, Mueller JL, Javid MP, Mito JK, Kirsch DG, Ramanujam N, Brown JQ. Optimization of a widefield structured illumination microscope for non-destructive assessment and quantification of nuclear features in tumor margins of a primary mouse model of sarcoma. *PLoS one*. 2013;8(7):e68868.

Structured Illumination

Example: Prostate

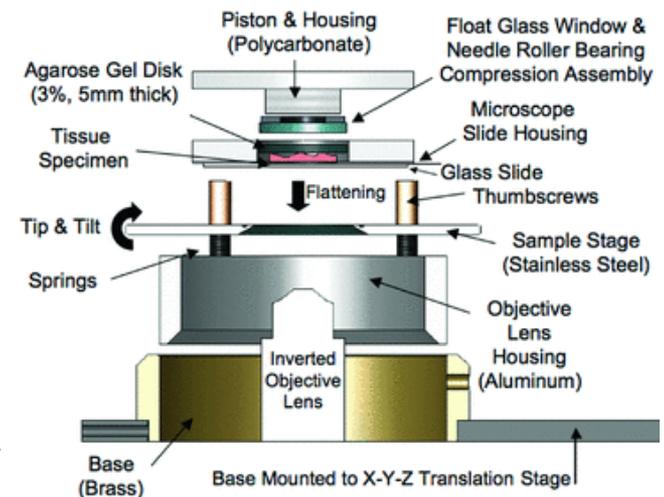

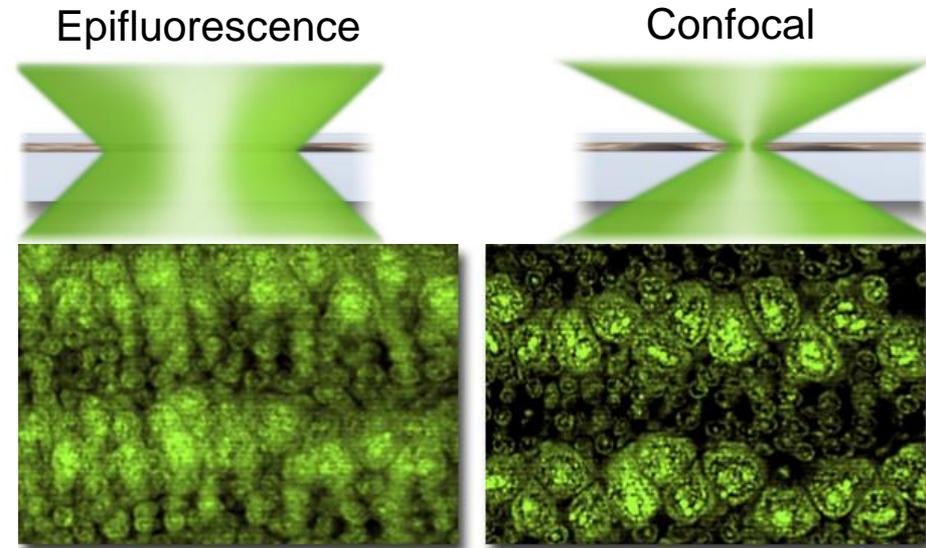

**Easy distinction of
benign and
neoplastic lesions**

**High accuracy:
AUC of 0.82-0.88**

Confocal

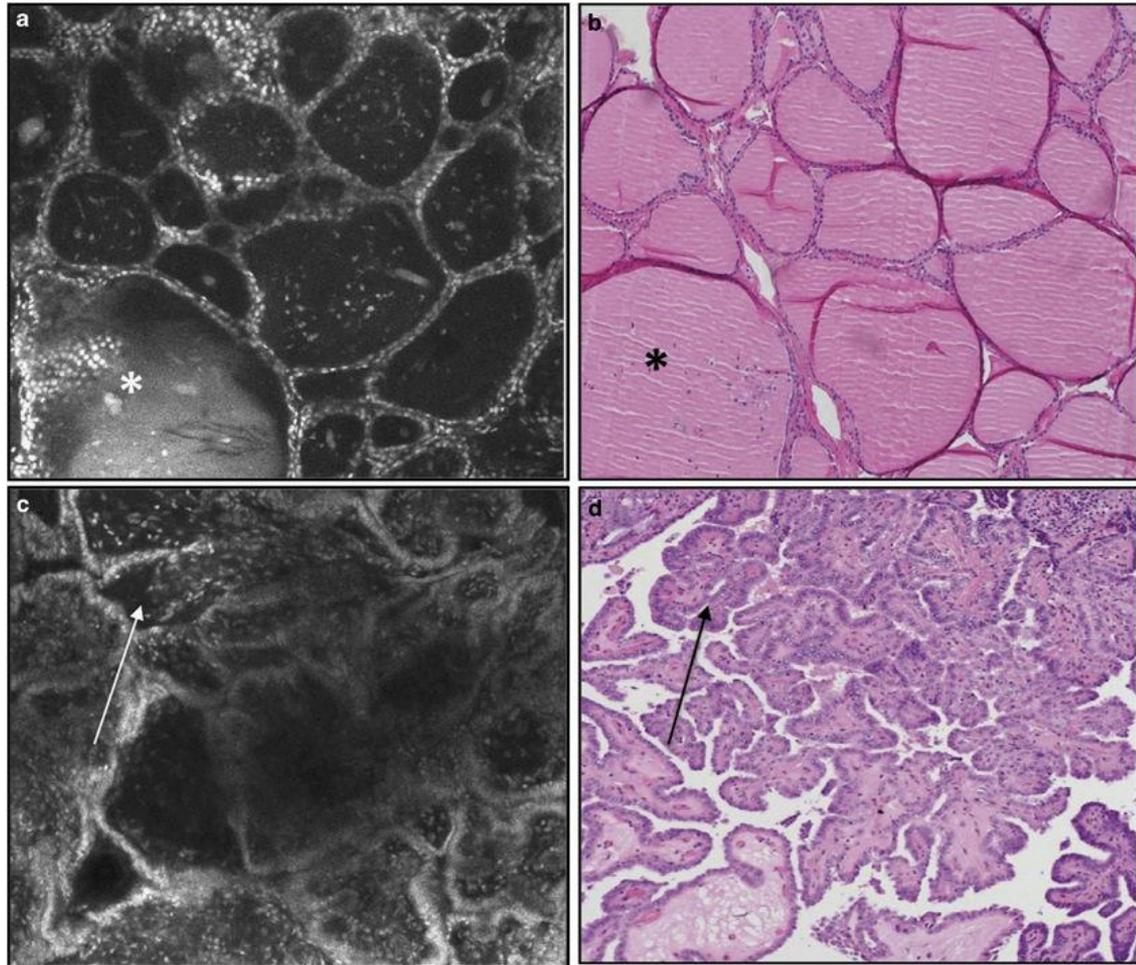

- **Confocal microscopy**
- **Uses a pin-hole to reject out-of-focus light**
- **Advantages**
 - Depth of imaging
 - High resolution
 - Commercially available
- **Disadvantages**
 - Requires elaborate tissue flattening for surface imaging
 - Slow (in 3D) due to point-scanning

Confocal

Example: Thyroid

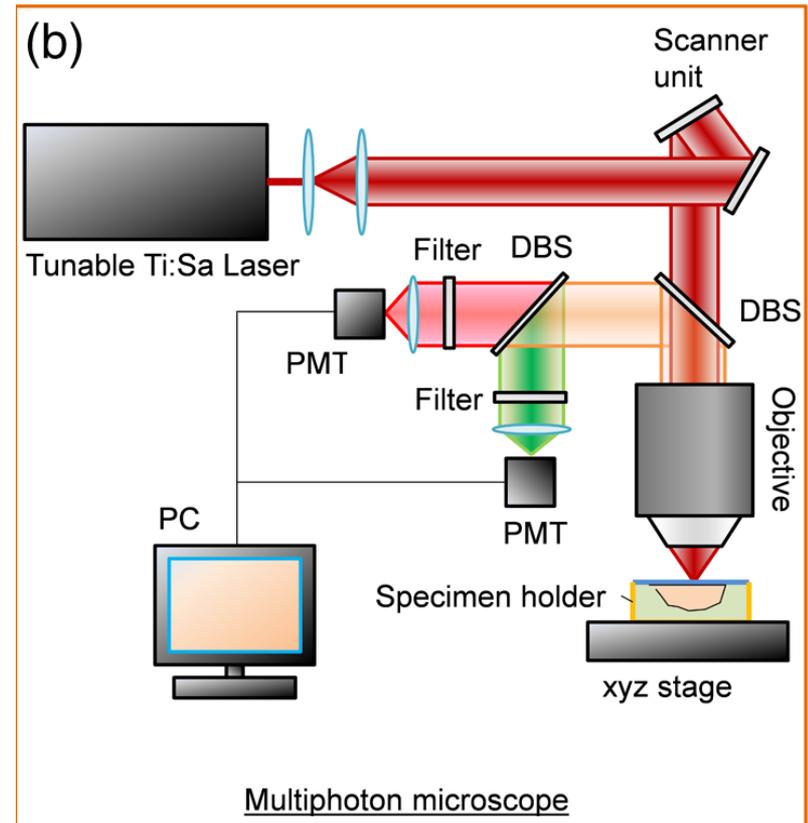

Easy distinction of
benign and
neoplastic lesions

Ragazzi M, Piana S, Longo C, Castagnetti F, Foroni M, Ferrari G, Gardini G, Pellacani G. Fluorescence confocal microscopy for pathologists. *Modern Pathology*. 2014;27(3):460-71.

Multiphoton

- **Multiphoton microscopy**
 - Aka two-photon, nonlinear
- **Uses a pulsed laser to achieve precise localization of excitation**
- **Advantages**
 - Depth of imaging
 - Very high resolution
- **Disadvantages**
 - Requires elaborate tissue flattening for surface imaging
 - Slow (in 3D) due to point-scanning
 - Expensive and complex optics

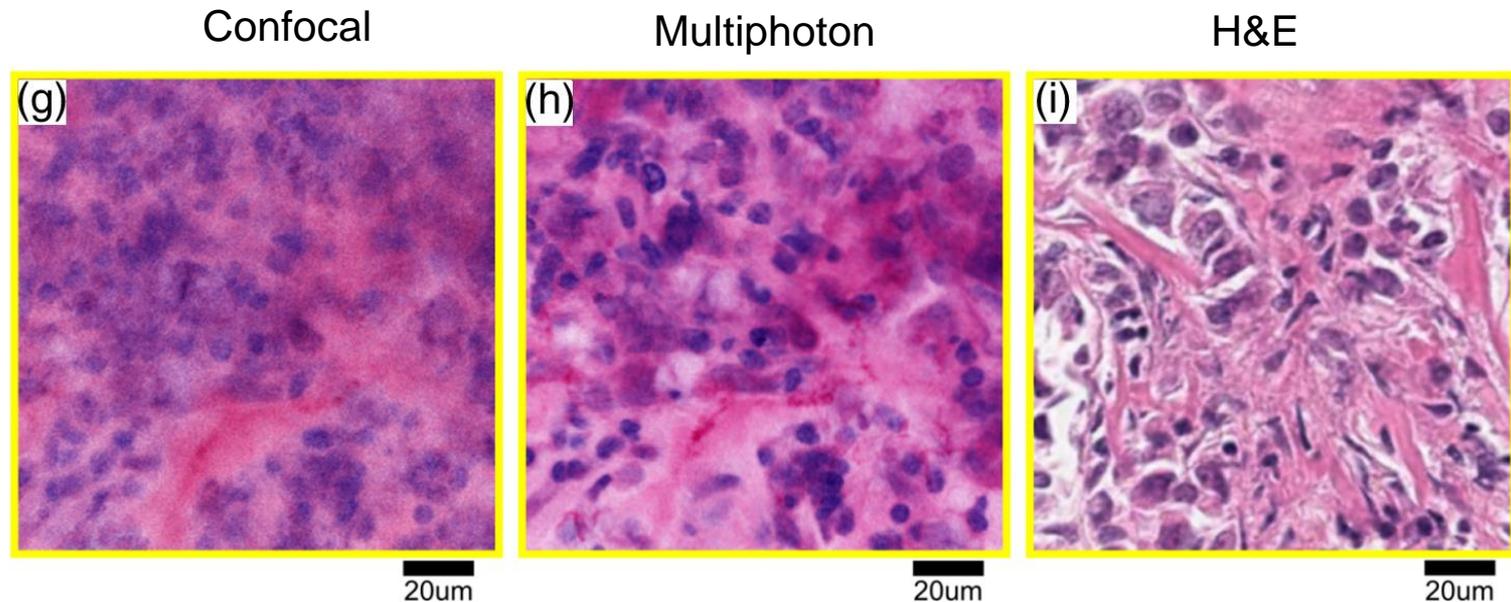

Yoshitake T, Giacomelli MG, Cahill LC, Schmolze DB, Vardeh H, Faulkner-Jones BE, Connolly JL, Fujimoto JG. Direct comparison between confocal and multiphoton microscopy for rapid histopathological evaluation of unfixed human breast tissue. *Journal of Biomedical Optics*. 2016;21(12):126021-.

Multiphoton

Example: Breast, invasive ductal carcinoma

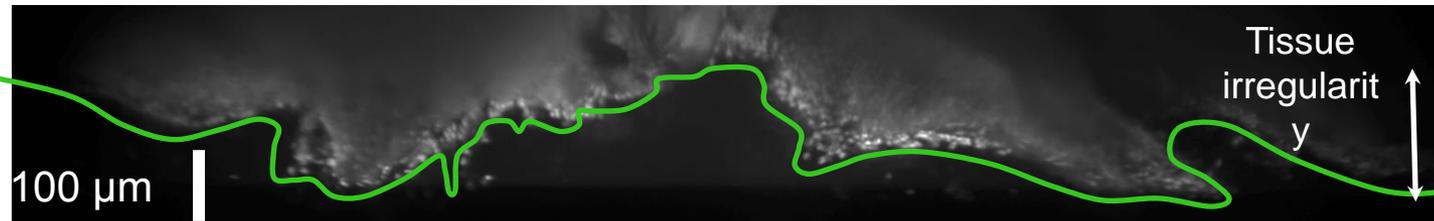

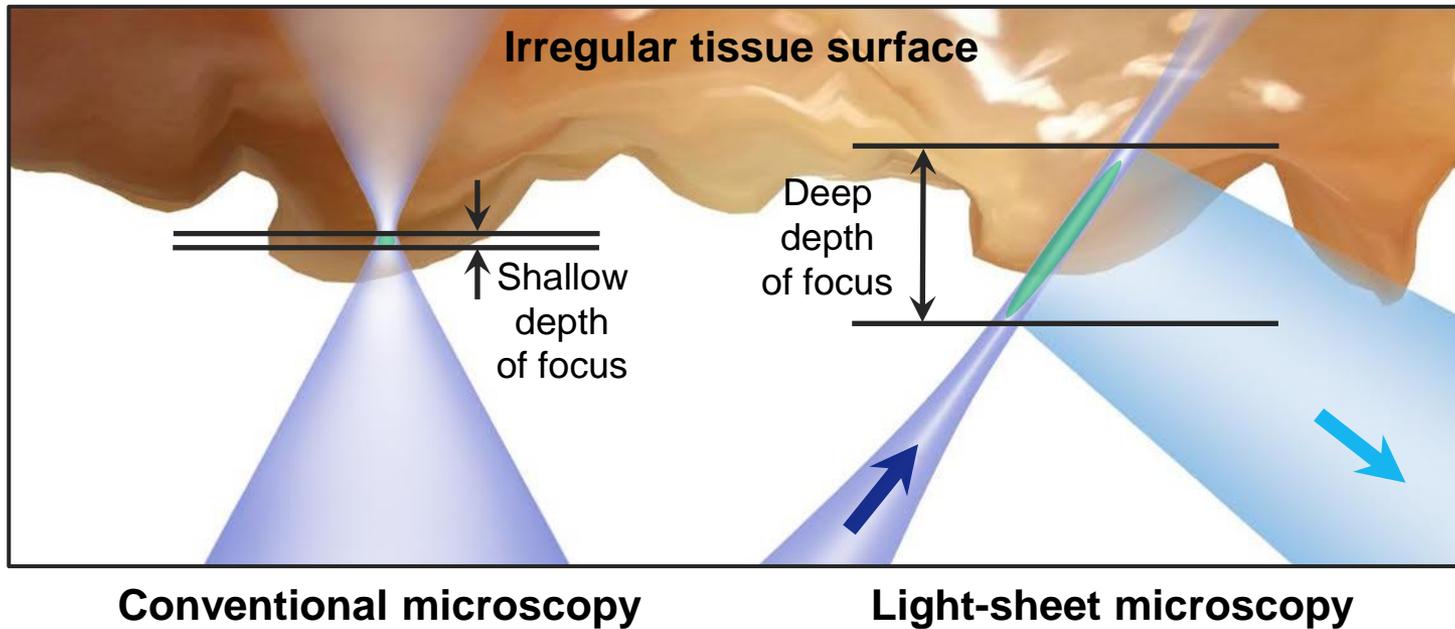

Crisp nuclear detail, easy diagnosis (>94% accuracy)¹

Images: Yoshitake T, Giacomelli MG, Cahill LC, Schmolze DB, Vardeh H, Faulkner-Jones BE, Connolly JL, Fujimoto JG. Direct comparison between confocal and multiphoton microscopy for rapid histopathological evaluation of unfixed human breast tissue. *Journal of biomedical optics*. 2016;21(12):126021-.

LSM for imaging fresh tissues

Advantage: LSM rapidly images a 3D volume, within which an irregular tissue surface may be digitally extracted and imaged over a range of depths

LSM Demonstration

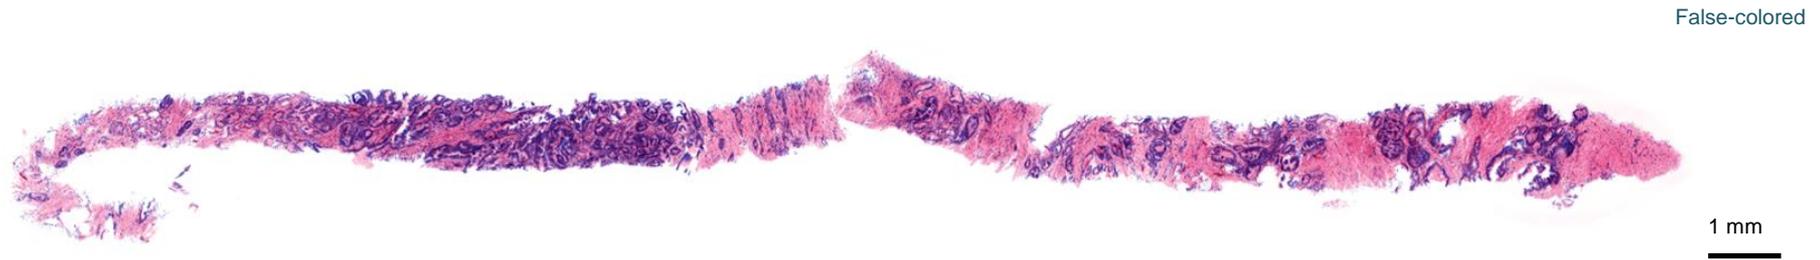

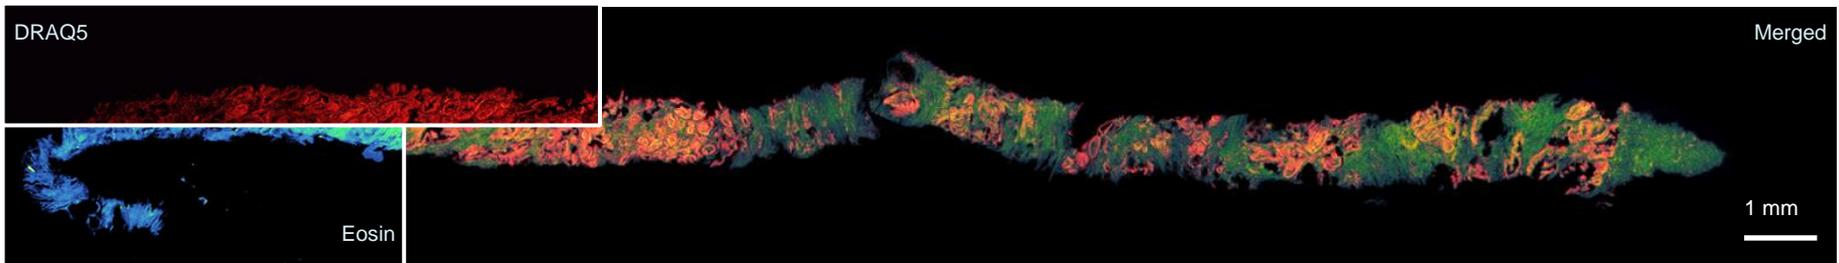

Outline

- **Motivation for slide-free microscopy of fresh tissue**
- **Overview of slide-free microscopy techniques**
- **False-coloring to mimic H&E**
- **Use-cases**
- **Summary**

False-color H&E imaging

DRAQ5 and Eosin dual-channel fluorescent staining and imaging of human prostate core-needle biopsy

False-color H&E imaging

Nuclear stain (DRAQ5, $\lambda_{ex} = 660 \text{ nm}$, $\lambda_{em} = 680 \text{ nm}$)

'Digital' histology

Cytoplasmic stain (Eosin, $\lambda_{ex} = 488 \text{ nm}$, $\lambda_{em} = 500 \text{ nm}$)

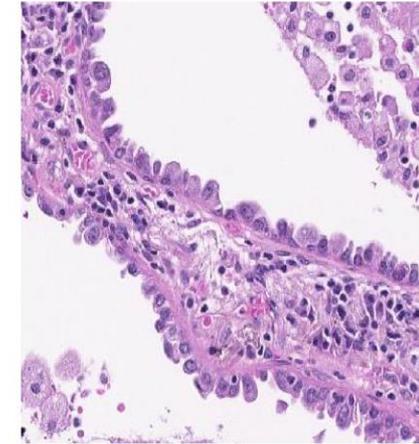

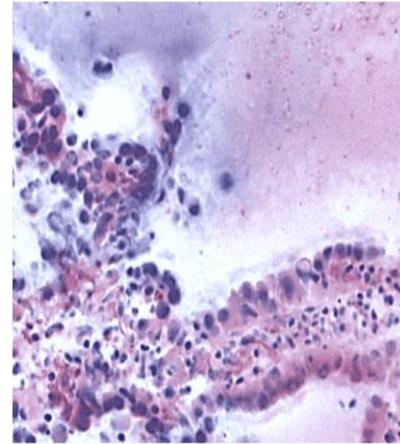

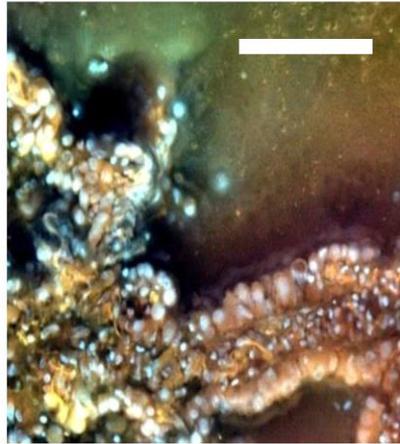

False-color H&E imaging

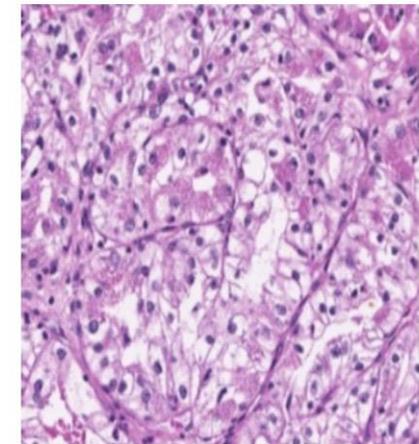

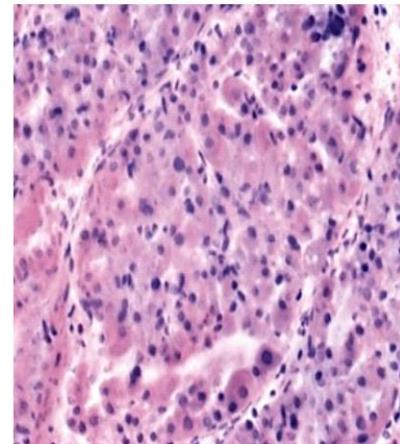

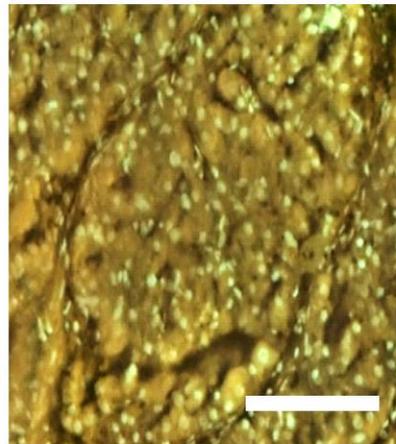

— MUSE —

H&E

Adenocarcinoma
Lung

Clear cell
carcinoma
Kidney

H&E GUI – Tune the stain to your liking

Remix Mode: Brightfield (Beer-Lambert)

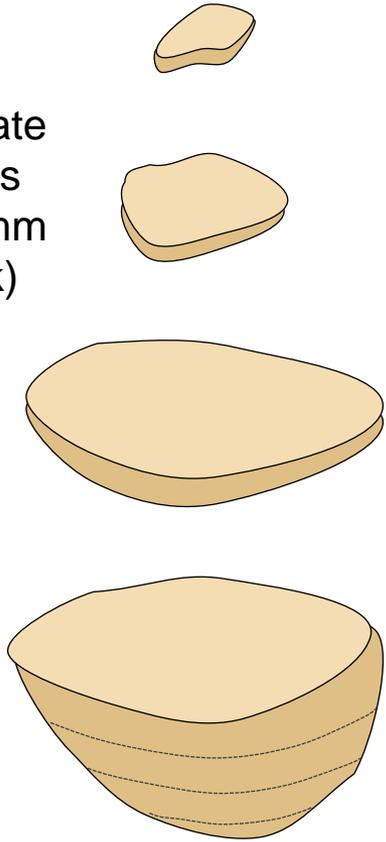

Outline

- **Motivation for slide-free microscopy of fresh tissue**
- **Overview of slide-free microscopy techniques**
- **False-coloring to mimic H&E**
- **Use-cases**
- **Summary**

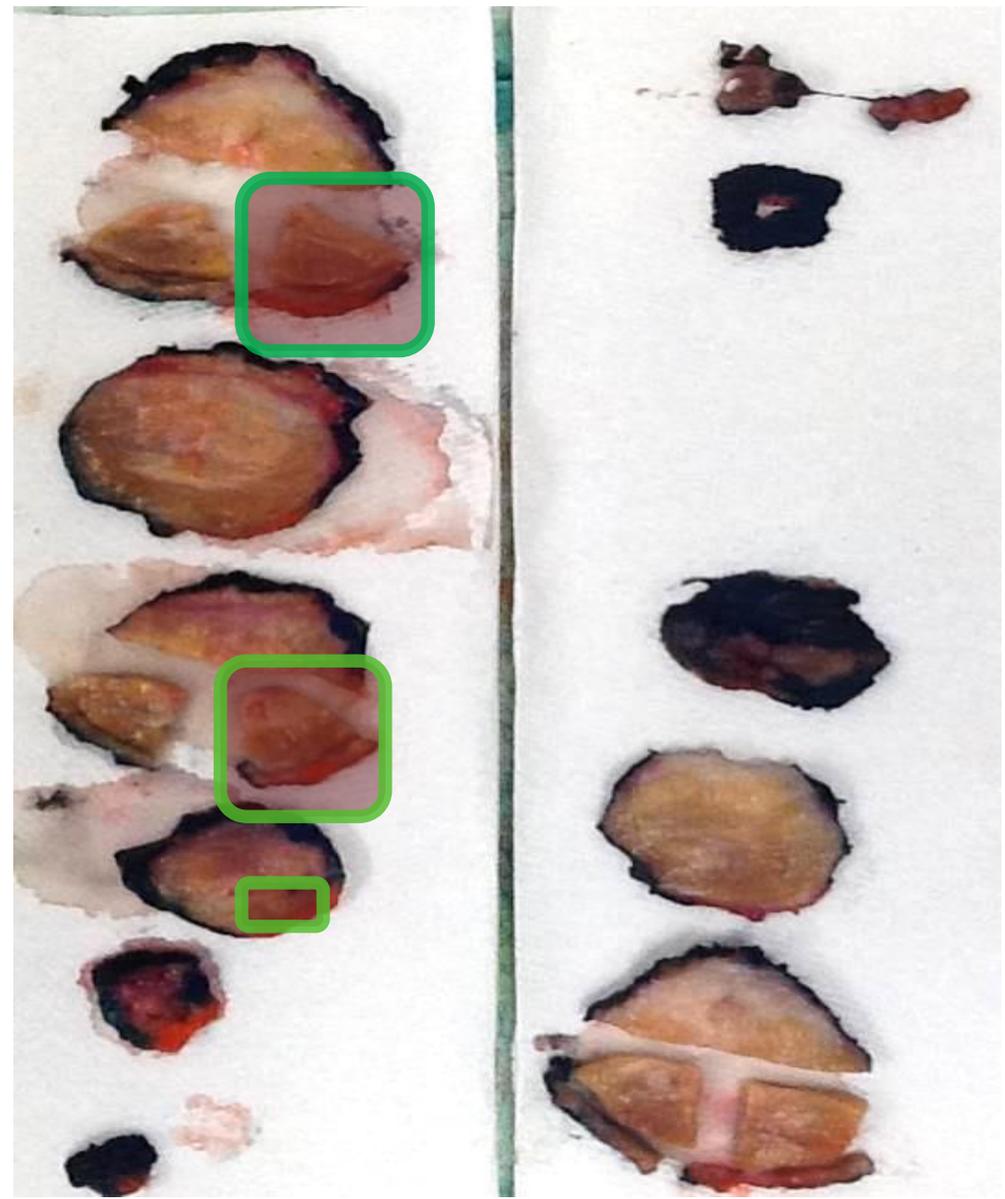

Use-case: Post-operative triaging of fresh tissue

Radical prostatectomy

Prostate slices
(3-5 mm thick)

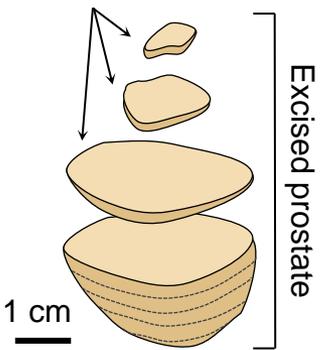

1 cm

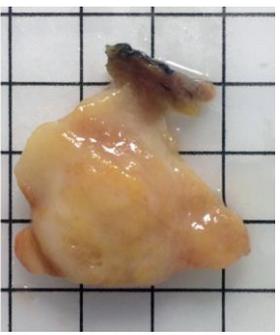

Use-case: Post-operative triaging of fresh tissue

Prostate slices
(3-5 mm thick)

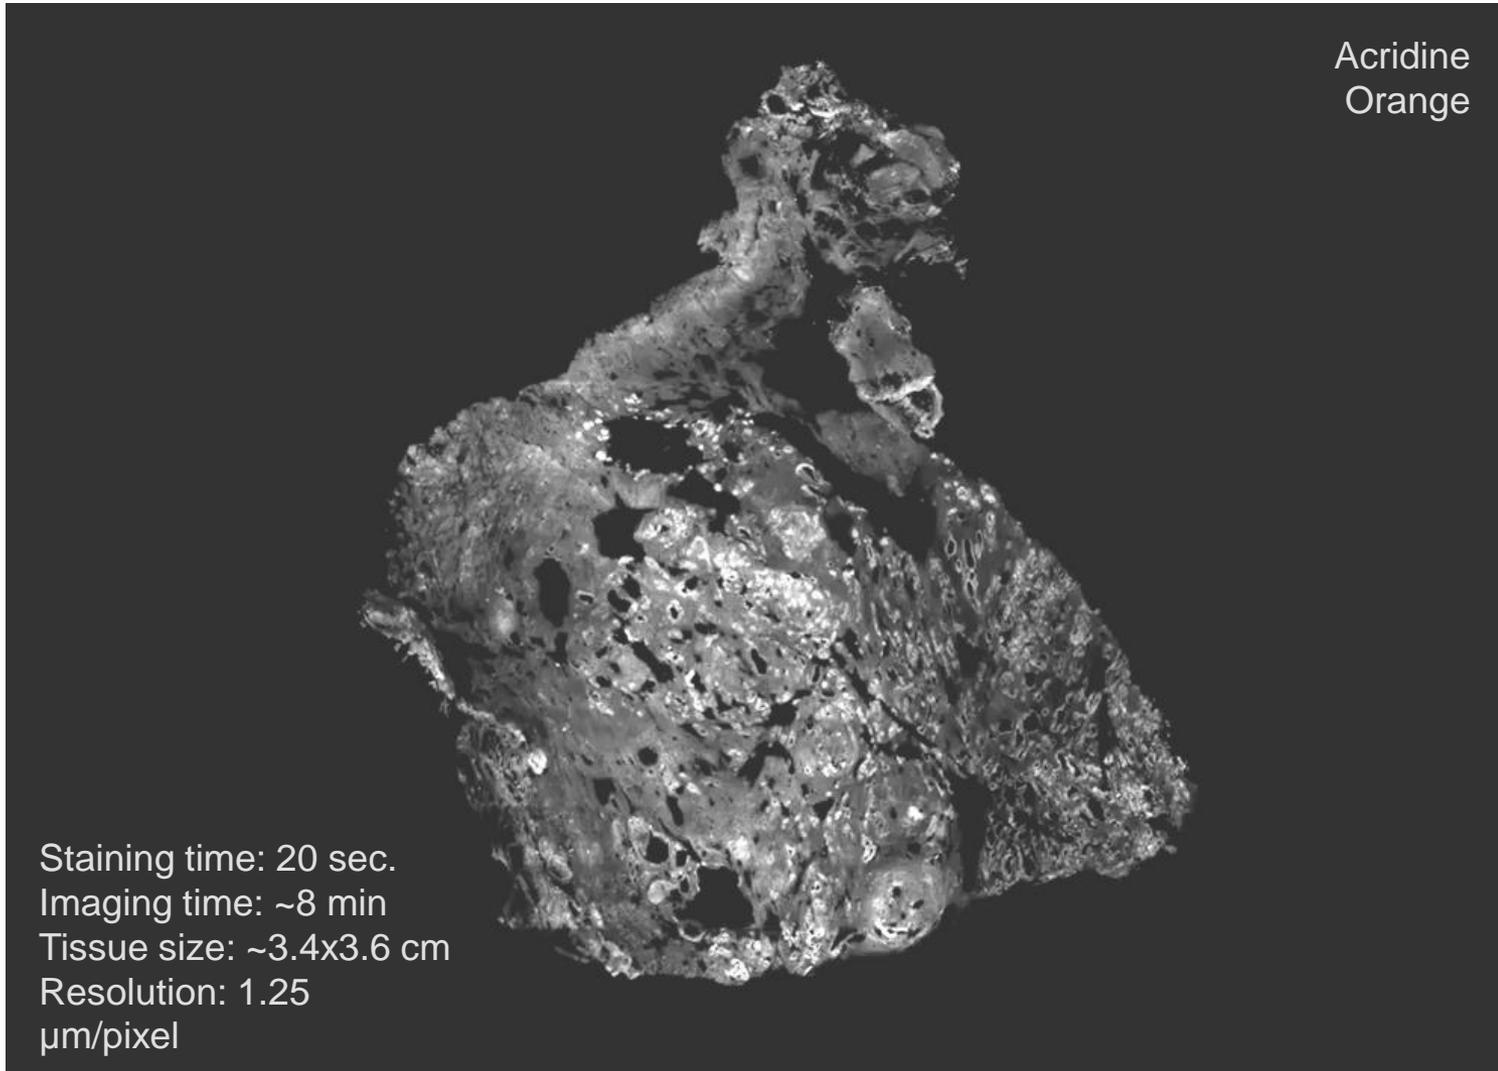

Fresh prostate slice

1 cm

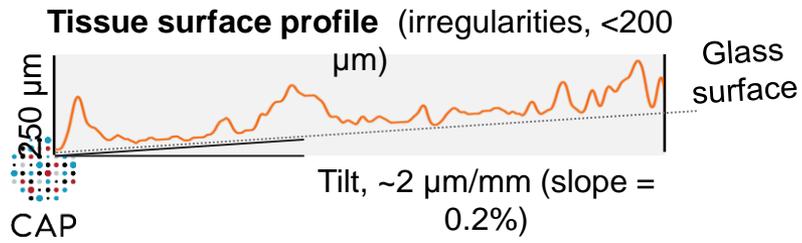

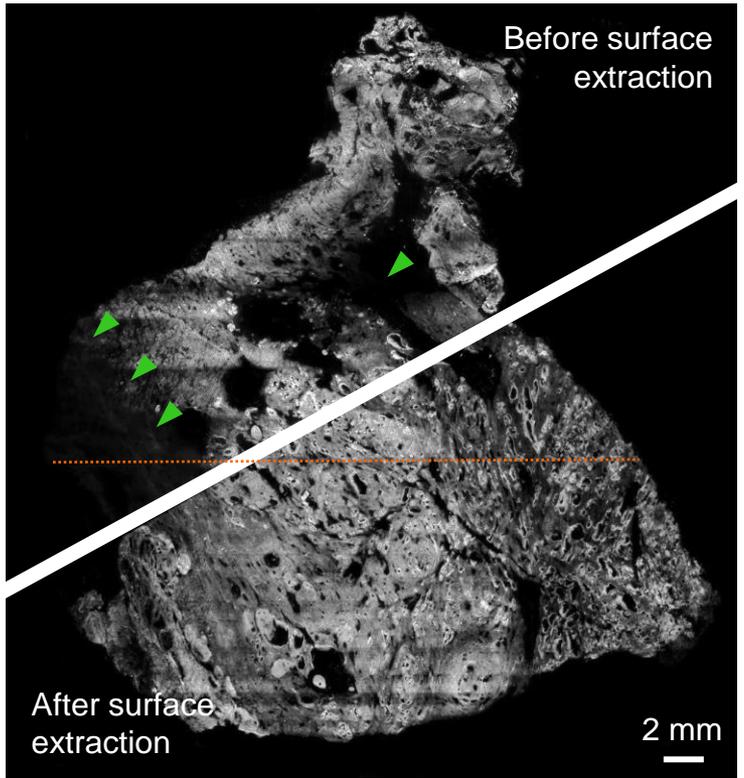

CAP

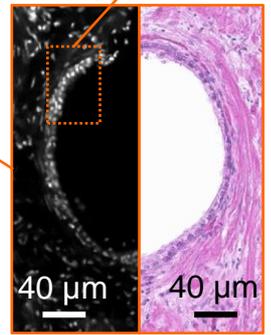

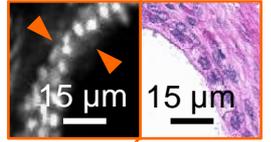

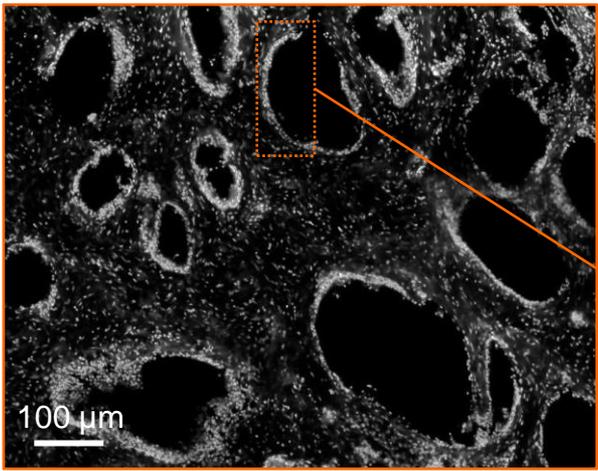

Use-case: Post-operative triaging of fresh tissue

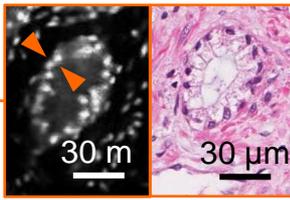

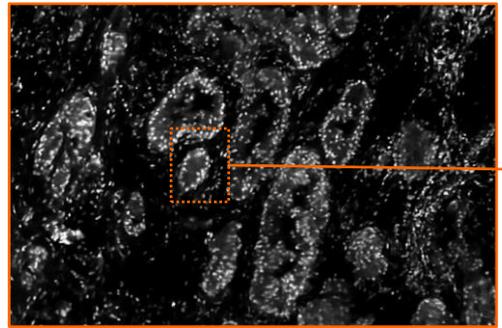

Light-sheet microscopy of prostate tissue

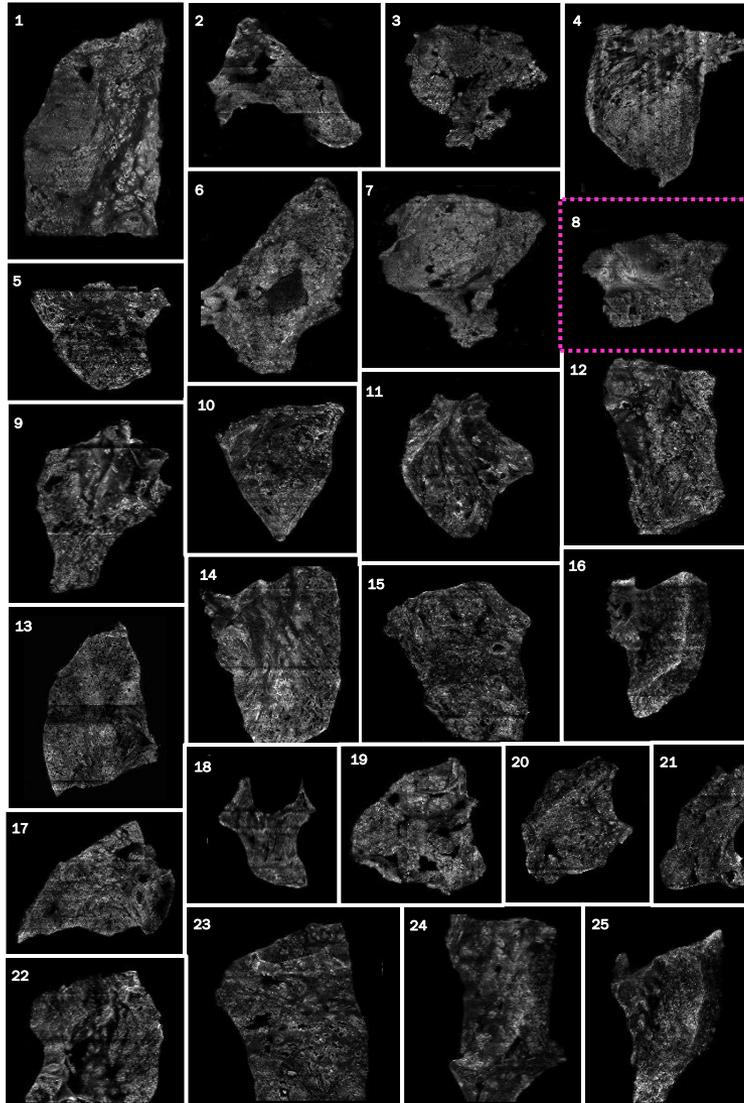

Normal prostate glands

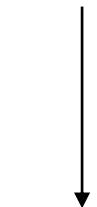

Prostate adenocarcinoma

Clinical correlation study

Fresh
prostate
slice

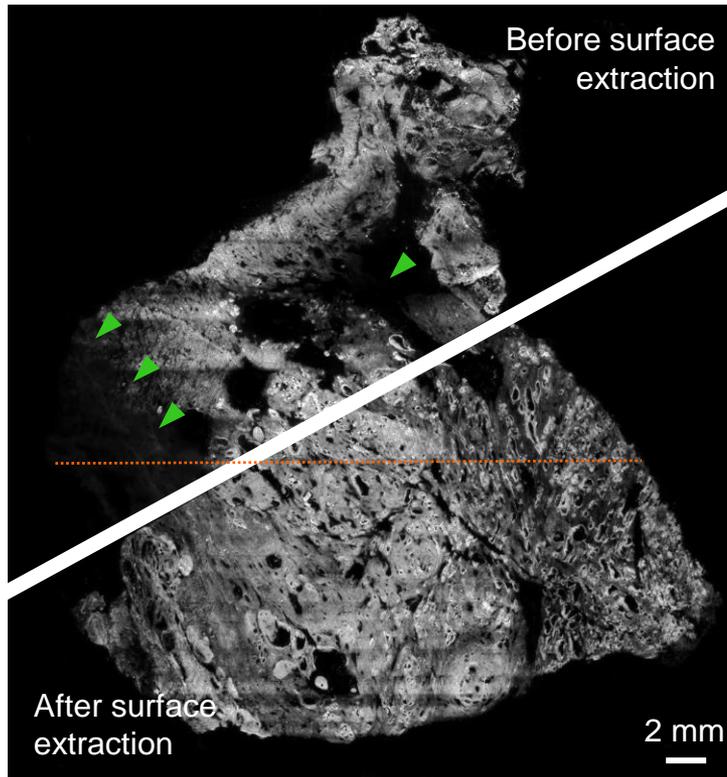

LSM
image

FFPE
H&E
slide

Clinical correlation study

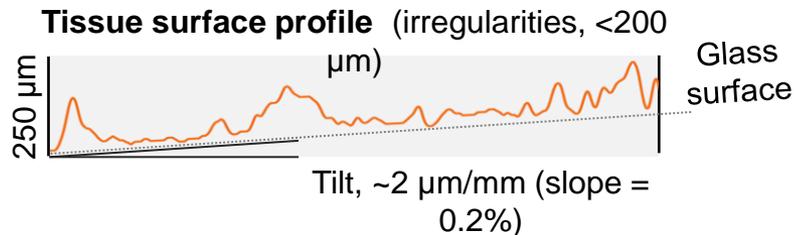

24 tissue samples

- 12 benign
- 12 carcinoma

Sensitivity: 0.92

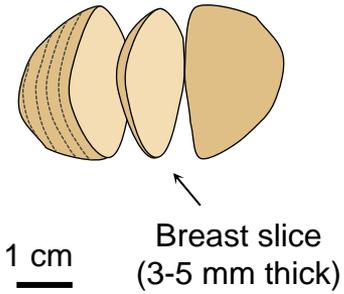

Specificity: 0.92

*Detected 2 cases of positive margins missed on 2D section

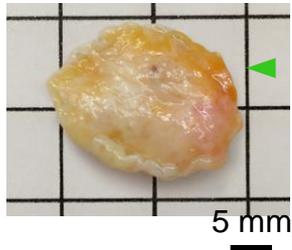

Intra-operative imaging of breast tissue

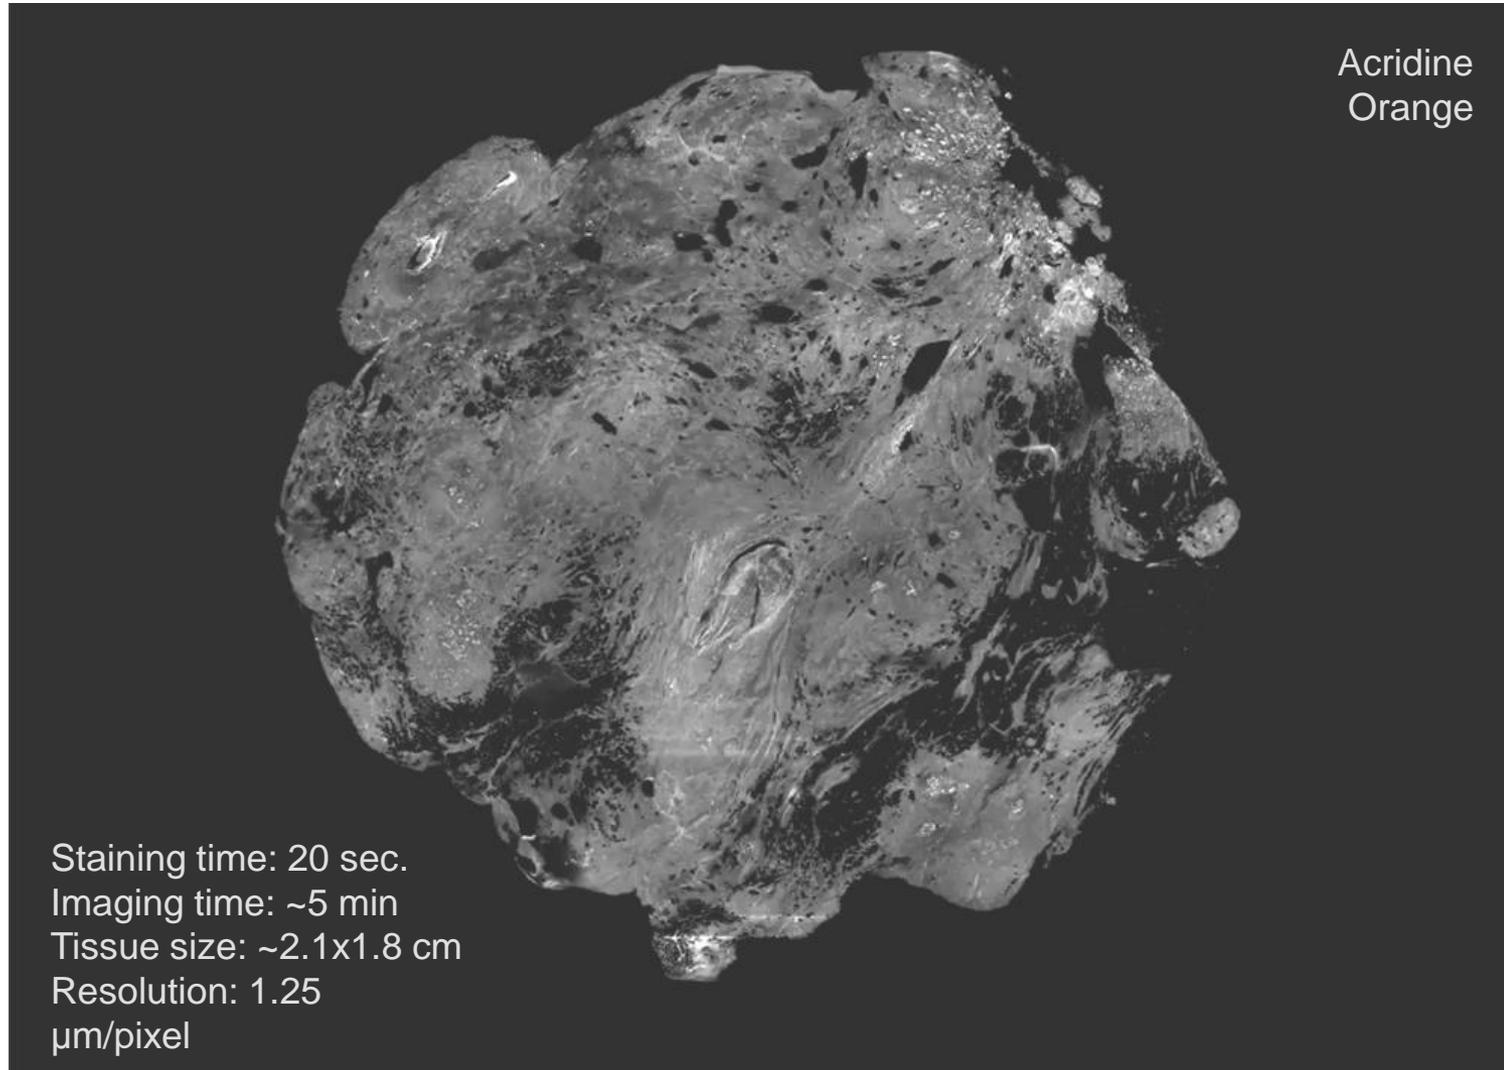

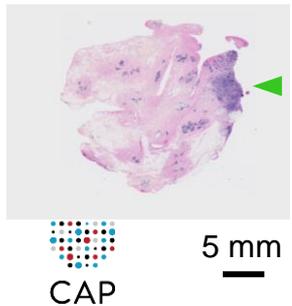

Lumpectomy

Fresh breast tissue

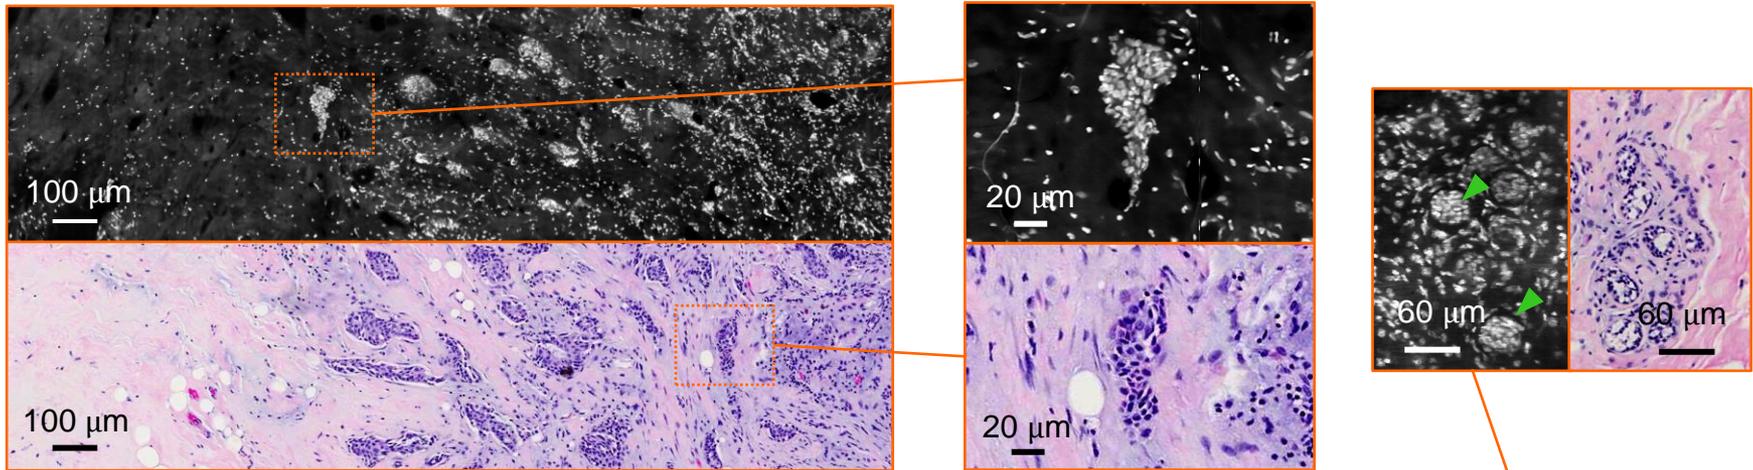

H&E

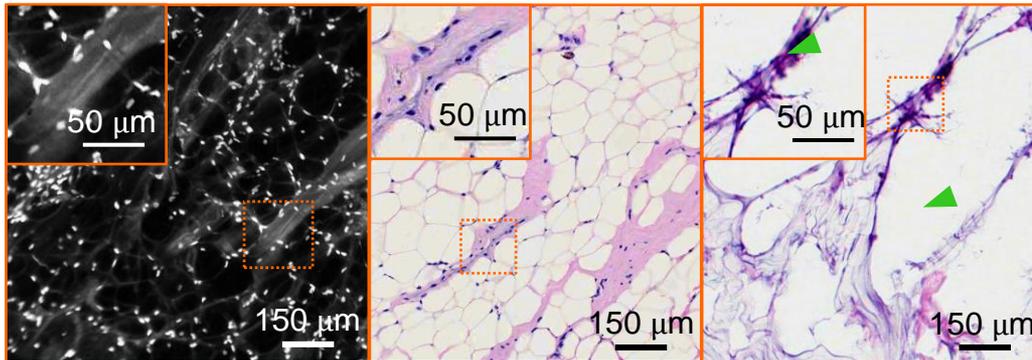

Intra-operative imaging of breast tissue

Invasive ductal carcinoma with adjacent normal breast tissue

Adipose tissue

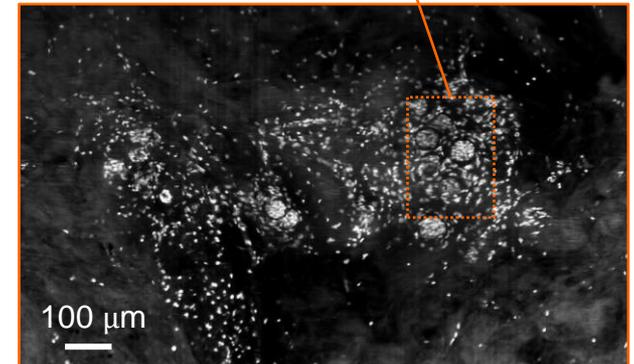

Light-sheet microscopy
of fresh breast tissue

Benign breast lobules

CAP

Intra-operative imaging of prostatectomies - SIM

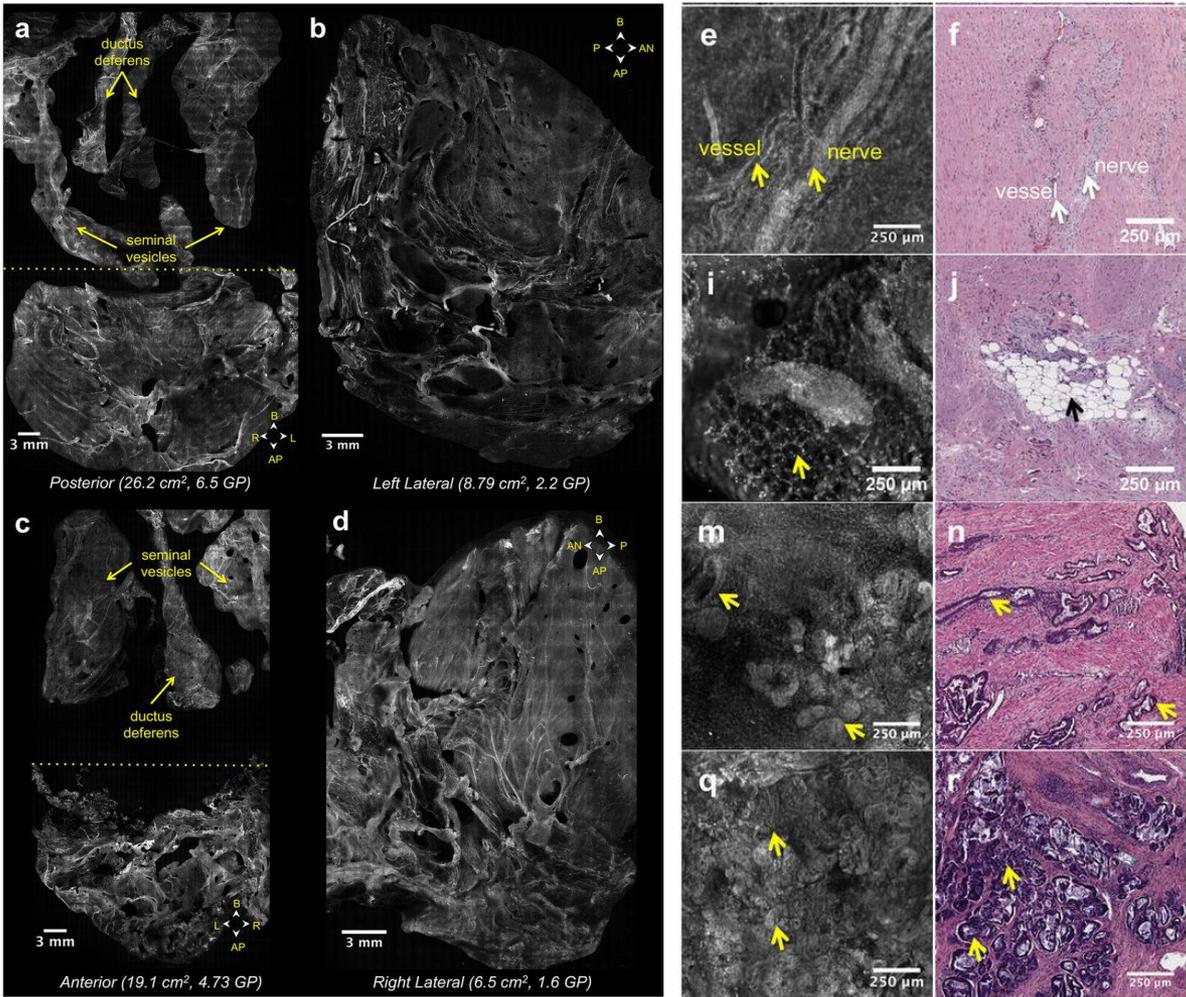

Wang M, Tulman DB, Sholl AB, Kimbrell HZ, Mandava SH, Elfer KN, Luethy S, Maddox MM, Lai W, Lee BR, Brown JQ. Gigapixel surface imaging of radical prostatectomy specimens for comprehensive detection of cancer-positive surgical margins using structured illumination microscopy. *Scientific reports*. 2016;6:27419.

Intra-operative imaging of prostatectomies - SIM

Imaging of entire surface of radical prostatectomy specimen

~60 cm², ~15 minutes

Identification of key structures – nerves, adipose, carcinoma, benign glands

Wang M, Tulman DB, Sholl AB, Kimbrell HZ, Mandava SH, Elfer KN, Luethy S, Maddox MM, Lai W, Lee BR, Brown JQ. Gigapixel surface imaging of radical prostatectomy specimens for comprehensive detection of cancer-positive surgical margins using structured illumination microscopy. *Scientific reports*. 2016;6:27419.

CAP

Outline

- **Motivation for slide-free microscopy of fresh tissue**
- **Overview of slide-free microscopy techniques**
- **False-coloring to mimic H&E**
- **Use-cases**
- **Summary**

Summary

- Slide-free imaging → Efficient workflow
- Non-destructive → Preservation of tissue for molecular testing
- Digital → Use digital pathology tools for quantification, annotation, etc.
- Multiple options (MUSE, SIM, Confocal, MPM, LSM)

Summary (continued)

- Use-cases
 - Triaging of large surgical specimens
 - Triaging of small biopsies
 - Permanent digital record
 - Entire specimen can be sent fresh for molecular studies
 - Intraoperative imaging
 - Large surface areas
 - Fatty tissue

Upcoming Webinars

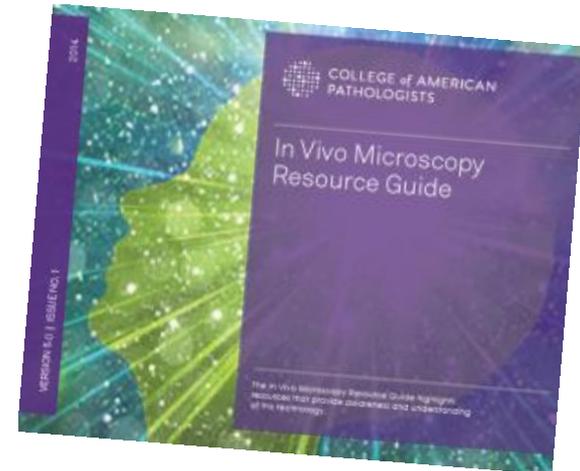

DATE	TOPIC	SPEAKER(s)
12/5	Role of Reflectance Confocal Microscopy in Skin Inflammations	Babar K. Rao, MD

Register for upcoming & archived webinars:
www.cap.org > Calendar > Webinars

The CAP In Vivo Microscopy Resource Guide – see handout

- The IVM resource guide highlights current IVM articles and other resources that assist in understanding and potentially adopting IVM and EVM
 - Printed guides are available for members (\$39) and non-members (\$69)
 - The digital copies of all four Resource Guides are a complimentary member benefit
 - Access them www.cap.org > Resources and Publications

IVM Short Presentations on Emerging Concepts (SPECs) – see handout

- IVM SPECs are:
 - Short PowerPoints, created for pathologists
 - Useful for educating pathologists colleagues about IVM and GI specialist on the role and value of pathologists in IVM
- IVM SPEC Topics:
 - In Vivo Microscopy (IVM): A New Role for Pathologists
 - IVM of the GI Tract
 - Ex Vivo Microscopy (EVM): A New Tool for Pathologists

Access them www.cap.org > Resources and Publications

IVM Topic Center Page on CAP.ORG

- **Check the IVM Topic Center for continued updates and for all your IVM resources**

www.cap.org > Search for “IVM Topic Center”

THANK YOU!

- Thank you for attending our webinar **“Rapid examination of fresh tissue using light-sheet microscopy”** by Nicholas P. Reder, MD, MPH.
 - For comments about this webinar or suggestions for upcoming webinars, contact ivminfo@cap.org
 - NOTE: There is no CME/CE credit available for today’s complimentary webinar. The pdf of the presentation will be sent out in a week.
